

Basic Information

Name : Siddhesh Vishwas Gajare

Course : PG-DAC,Aug25

Address : Jambut, Tal-Shirur, Dist-Pune, Mumbai, MAHARASHTRA

CCPP ID : PD1182

PG-DAC Marks

S.NO.	Module	Maximum Marks (Theory)	Obtained Marks
1	C++ Programming	40	32
2	Object Oriented Programming with Java	40	29
3	Algorithms and Data Structures(Using Java)	40	34
4	Web Programming Technologies	40	32
5	Database Technologies	40	24
6	Microsoft .NET Technologies	40	29
7	Concepts of OS & Software Development Methodologies	40	28
8	Web-based Java Programming	40	35
	Total	320	243

Academic Details

Level	Stream	Institute	Board/University	Passing Year	Degree %	Division
BE	Electronics & Telecommunication	Vivekananda Education Societys Institute of Technology	University of Mumbai , Mumbai , Maharashtra	2024	70.43 %	I
XII	Science	Hande Deshmukh Hitecg College Alephata	Maharashtra	2020	77.38 %	I
X	General	Jay Malhar High School Jambut	Maharashtra	2018	88.8 %	I

Academic Projects

Title : **Vehicle Management System**

Platform : J2EE, Spring Boot, React, MS.NET, MySQL, MongoDB, Git. **Duration** : 1 Month

Description : Designed and developed a Vehicle Management System using React for the frontend and Spring Boot for core backend services, while integrating MS.NET Web API for centralized logging, with MySQL and MongoDB for data management. The system enables vendors to manage vehicles, customers to browse, check availability, and book rentals seamlessly, and admins to control users, vehicles, reservations, and payments. Implemented JWT-based authentication for secure role-based access, integrated Razorpay payment gateway for smooth transactions, and followed RESTful API design for clean service communication. Applied SOLID and DRY principles with a layered architecture to ensure maintainable and scalable code, using MySQL for structured transactional data and MongoDB for unstructured data such as logs. Streamlined releases using CI/CD deployment, ensured smooth collaboration and version control, and used Jira for sprint management.

Title

Platform

Description

: Ear Biometric–Based Human Identification and Authentication System

: Python

: The Ear BiometricBased Human Identification and Authentication System is a security-focused project that uses the unique structure and geometry of the human ear for accurate identity verification. The system captures an ear image, performs preprocessing, and extracts distinctive features using OpenCV and a CNN-based deep learning model. These features are stored as biometric templates and compared during identification or authentication using similarity-based matching algorithms.The project includes a frontend interface for image upload, a backend API built using Python/Flask for model inference, and a database system for securely storing user details and biometric vectors. The solution demonstrates a complete end-to-end biometric pipeline, covering image acquisition, feature extraction, matching, template management, and secure access control. This system showcases strong skills in computer vision, deep learning, backend development, and biometric security implementation.
